| PROJECTS

ClearkBooks

ClearkBooks is a web based accounting software for US municipalities to maintain charges like water tax, property tax. In this I created a pages for adding accounts, portal settings and user settings.

Fluency

Fluency is an interpreter scheduling management for language service provider. In this I implemented a Google OAuth2.0 authentication and create google calendar events, When the user schedule an appointment create a google calendar event automatically.

MyImprint

MyImprint helps company is to boost their growth by oversee entire sales and support. In this I developed an Xero OAuth 2.0 authentication. Also connect multiple Xero Organization and generate a transaction report based on the customer requirement.

QPOSConnect

QPosConnect is an integration tool for sync data from QuickBooks POS to QuickBooks online. In this I developed both web and windows application. Windows application fetch all the transaction data from QuickBooks POS and Post it to web. In the web application user can post the data to QuickBooks online also automatic sync between POS and QuickBooks Online.

AWSParts

AWSParts is E-commerce website for selling automobile parts. In this I developed a admin portal for maintaining an inventory management system of the products. Also admin can add new products and create a purchase order for the products.
